

3 June 2022

Dear Member of Parliament

I am writing to you as a deeply concerned citizen, and I hope that you pay urgent attention to the serious information contained in the following open letter by New Zealand Doctors. An unredacted version has also been sent to the New Zealand Police.

The information in the executive summary alone alerts any responsible citizen and their elected representative, to pay serious attention and carry out further investigation:

*1. There is a shockingly large burden of deaths and injuries from the Covid-19 vaccine program, of itself and compared to any other treatment or vaccine in modern times. We report many cases that DEMAND proper investigation, as befits any medication lacking safety studies.*

*2. Our surveillance systems have been disabled in order to hide the extent of harm. Adverse event reporting is NOT COMPULSORY, and this alone undermines any attempt to portray the injections as safe.*

*3. Children and young people are dying and suffering particularly cardiac injuries (though many healthy elderly have died too), whilst their risk from covid-19 is particularly low. We believe we are being lied to. We present many cases halfway down this post.*

*4. We appeal AGAIN to the Police, headed by Andrew Coster, and our MPs, to intervene to protect the People.*

I would also like to take this opportunity to share my own personal experience. My mother, otherwise in good health, experienced chest pains and breathlessness after her second covid vaccine which worsened upon receiving the booster jab at the end of February this year. A month ago, she suffered a serious heart attack, and we are very lucky that she is still with us. Her angiogram showed no damage or degradation to her arteries, or any other obvious causes etc., and the cardiologist put it down to "stress". When I took my mother to the physio for the pain and inflammation in her shoulder post jab, her physio reported that she was seeing many injuries and hearing similar stories from patients experienced post the vaccination.

The deaths listed in the letter from the NZDSOS and adverse reactions such as my mother's must be urgently addressed, particularly considering that the safety testing around COVID-19 vaccinations was "fast-tracked" meaning that prior to the vaccine's introduction, there was no data on long-term safety. COVID-19 infection, if acquired, is mild for most, does not usually require hospital treatment, and most people go on to make a full recovery with no lasting ill effects. The same now cannot be said for COVID-19 vaccinations, as evidenced now in the safety reports and in the Doctor's open letter.

I believe the public have a right to be fully informed and receive support if they suffer adverse reactions from any drug, particularly one that has been mandated. There is no legal or moral justification for the deaths listed in this open letter and there should not be any acceptance of any serious adverse reactions, in the name of public health, especially when the Government has pushed the `every life matter's narrative regarding COVID-19.

I hope you will support an investigation into the alarming deaths referred to in the NZDSOS letter.
