

12 August 2022

Dear Colleagues

Thank you for the time spent reading this highly important communication regarding vulnerabilities for our patients and ourselves. If this is hand-delivered, a very similar letter is available [on our website](#) (1) with all the links. We expect you are sick of conflicting data so we have left the science and our arguments to section 2 of this letter. We suggest reading this without distraction but with curiosity and an open mind.

We are writing to you as medical colleagues as we are in an important time in history and we each need to make a decision, for we will all be held accountable.

While we inevitably had different reasons for going into medicine, from a fascination with the science to helping those in need, we understood that practicing medicine came with kudos, responsibility and a certain standing in society. Doctors were seen as honest and ethical, holding their duty to their patients above their duty to any person or organisation except perhaps, but not always, their families. However, something has changed.

Although labelled as anti-vaxxers, vilified, derided, dragged through ongoing regulatory procedures, and cast into the wilderness, all we have been advocating for, for our patients and ourselves, are the fundamental ethical principles of medical practice - fully informed consent and freedom to choose whether or not to undergo a medical procedure.

The public is increasingly saying that they do not trust their doctors, they don't want to see you and they definitely don't want to go anywhere near a hospital. The profession is in crisis and our 'health' system appears to be entering a death spiral. We are fearful that if enough doctors do not put their patients first and stand up for ethical medicine, the profession will soon be reviled and despised rather than venerated. When medication is pushed on patients and doctors are seen to be being paid for this, they lose respect. This is where we are now – a profession on the brink of collapse.

Do not look away - ignoring this information will leave **YOU PERSONALLY LIABLE**. In law, you become an accessory to someone else's crime. Even if by some twist of fate you are legally exonerated, you still have to live with yourself, your family, and your own ethics. You can choose ignorance or - worse - temporary status and

money over doing what is right, but you will always have to live with your conscience.

The adage "those who do not learn from history are bound to repeat it" holds true, as does "all that is needed for evil to flourish is for good men to stand aside and do nothing".

In short, medicine has been taken over by a destructive state. Many more children and young people are dying following their injections, which have not delivered on their promise than have died from the pandemic virus. As the truth emerges this chapter in medical history will end in recrimination, loss of trust and litigation against us if we don't act.

Have we not learned any medical law, about the absolutes in the Nuremberg Code and the Geneva Convention (which applies in peacetime too, both to civilians and enemy prisoners), our NZ Bill of Rights and HDC code, etc? Just because all our institutions are ignoring these rights now does **NOT** protect us from future prosecution.

Our PM's appeal for kindness rapidly evaporated, to be replaced with denial, distortion, coldness and cruelty. Informed consent has been replaced with the mantra of safe and effective. The medical profession was expected, in fact, forced to get in behind the Single Source of Truth.

Our captured Medical Council willingly stepped up to be a politicised hit man, now revealed to be run by a shadowy U.S. **private** group called the Federation of State Medical Boards (FSMB). The FSMB has broken cover and is openly advising the world's medical authorities on how to suppress dissenting doctors. Is this OK, on our watch? MCNZ has stated it does not need science to back its position or to refute contradicting evidence, and our human rights to free speech are not its concern, although courts here and in the UK have disagreed. It never elevated our questions above those of "crazy antivaxers spoiling for a fight". We authors have vaccinated our entire careers!

Does our Council represent the best interests of us and our patients, or has it overseen a stake driven through the heart of ethical medicine: the doctor-patient relationship, unique and precious? Can the State really match the duty of care that generations of doctors have recognised? Free speech has been censored, bodily autonomy denied and violated. Oppression rather than freedom to advise became the name of the game, and our profession has mostly remained muzzled throughout, a victim of the biggest sticks and carrots we have ever seen.

Now there is an epidemic of - well, everything. We've all worked together through multiple viral seasons, but this one takes the biscuit. What has changed? Where is your line? What are your ethical values? At what point would you say that this

government has gone too far and has embedded itself too deeply into the sacrosanct doctor-patient relationship?

Numerous New Zealanders, including health professionals of all levels, have been harmed by the Pfizer 'vaccine'. They are desperately trying to tell you, to get you to listen and hear their stories. One of the first things we were taught at medical school was "Listen to the patient, the diagnosis is in the history." Why have you stopped listening? Why won't you hear?

We could be heading into a dreadful [catastrophe](#) (2) if we don't show courage and bring an end to this madness. Our profession stands on a precipice. The so-called unanimity of experts won't save us; only the truth will if it doesn't destroy us first. If just 10% of us stand up and speak out, this could all be over in a fortnight.

Please take a dose of humility, gird your loins, admit error and prepare to fight for the scientific method, open debate, informed consent, the practice of ethical medicine and an end to coercion and lies. Please, [join us](#). (3)

Section 2

We are well over a hundred doctors, supported also by medical scientists and other practitioners, who have worked hard at NZDSOS.com and in public to critically evaluate the “government science” advanced to justify its (failed) lockdowns, masks and forced vaccination policy. For obvious reasons our exact names and numbers are mostly kept private now since the Medical Council is worn out from efforts to persecute the ones it does know about.

It has become obvious Comirnaty has failed as a 'vaccine'. The promise of individual and herd immunity has not materialised. Here's a recent [Immunology 202](#) (4) take from a WHO expert who has been proven right all the way along on emerging variants, likely produced by vaccination. A slightly different take on some aspects [here](#) (5). (Read these whilst you can; we are on the eve of much more aggressive censorship).

Instead of the promised herd immunity, the fully 'vaccinated' and boosted are becoming infected and [re-infected](#) (6) at similar or even [increased](#) (7) rates compared to the unvaccinated. The evidence showing Comirnaty reduces Covid-19 severity and hospitalisations is looking like the result of [categorisation errors](#) (8), deliberate or otherwise. True or not, what effect do the serious adverse events and deaths caused by Comirnaty have on all-cause mortality and morbidity?

So, it's not effective. How safe is it? Please read our posts on [Deaths Following Injections](#) (9), [Sudden Adult Death Syndrome](#) (10), [Monkey Pox](#) (here we go again?) (11) and open [letters](#) (12) to all relevant bodies including Medsafe, HDC, Police, Human Rights Commission, Ombudsman, MPs, Chief Coroner – all seeming to be victims of a pandemic of regulatory capture. It is now up to us.

The CDC has acknowledged some [serious adverse events](#) (13). So have the parents of dead children in New Zealand. Some of us are caring for the bereaved. An Australian group of medical professionals has gathered a list of 1000 peer-reviewed [papers](#) (14) questioning Covid-19 vaccine safety. All the important landmark papers are here in amongst many case reports.

The [more you vaccinate](#) (15), the worse it gets. Commentary on this very important study ignored by the usual talking heads is [at](#) this link (16). [Peter Doshi](#) (17), a BMJ editor, and epidemiology giant Sandler Greenland prove the excess risk of AESIs (adverse events of special interest) is greater than the reduction in COVID-19 hospitalisations. The [package insert](#) (18) which comes with Comirnaty states, “**data are insufficient to inform vaccine-associated risks in pregnancy** (19)”. It also states that “**it has not been evaluated for the potential to cause carcinogenicity** (20), **genotoxicity, or impairment of male fertility**. (21) ” We say there is now serious evidence for all the foregoing.

The doctors group Canadian Covid Care Alliance [eviscerates](#) (22) Pfizer's original randomised controlled [trial](#) (RCT) (23), labelling the 'vaccine' a toxic agent. It does cause strokes, MIs, clots, bleeding, cardiac inflammation and sudden death. Dramatically excess all-cause deaths are being reported in the heaviest vaccinated countries. (24), (25), (26), (27), (28). Yet, all we hear from our politicians, the MSM, medical professionals and 'experts' is that the vaccine is "safe and effective, safe and effective, get your booster", as if seeing the disaster that their statement is, they can do nothing but double-down on it.

Talking of Canadian doctors, a cluster of 14 have [died](#) (29) recently, 4 in one hospital over 2 weeks, mostly young and healthy, in lockstep with the roll-out of the 2nd booster. There are several NZ doctors on the Citizen's Database [here](#) (30) (along with 2 dead dentists, nurses, teachers, farmers); a young female GP had a stroke (one amongst very many) early during the rollout of first dose to health workers. Of course, many other mandated sectors have also suffered deaths and injuries following vaccination, but doctors stick out as usually health-literate with temperate lifestyles and tend not to drop dead at a young age; neither do children.

A sports mad 12 year old girl has just been added to another cluster of suddenly dead kids in the last fortnight - two 14-year-old boys at opposite ends of the country, a 6-year-old girl and a 12-year-old boy. We can't recommend scientist Dr Guy Hatchard's work enough, and his latest on these deaths [here](#) (31) is a salient and reflective warning.

Many of you are caring for the bereaved of these hundreds of younger people mysteriously and suddenly dead. On our professions' behalf, we have been collecting and sending these details to Medsafe and Police - again and again - in hope that proper investigations can rule the injection in or out, remembering that Bloomfield told us at the start that every single vaccinated person would be followed up. Surely, they should investigate the dead ones at least?

Serious adverse events possibly caused by Comirnaty are too often obfuscated, denied, and/or brushed aside, not investigated or taken seriously by doctors and others. See our [Truth Project](#) (32) for some examples. The stories of [Maddie De Garay](#) (33) at 31.40 minutes and Brianne Dressen at 38 minutes, both in vaccine trials, demonstrate this. The only safety checks on this worldwide 'vaccine' roll-out, with a few [exceptions](#) (34), are passive, laggy, voluntary reporting systems such as [VAERS](#) (35) and our own CARM. Scroll down to the two graphs [on this page](#) (36) and notice the massive spike in serious adverse events. It's striking. Why don't we have any active monitoring, as Dr Petoussis Harris advised before the rollouts started?

[Here](#) (37) an informed layman lets the FDA commission know what he thinks, in an impressive 3-minute take down. [A doctor](#) (38) pours scorn on the FDA's unbelievable authorisation of the mRNA vaccine for our smallest kids. This evolutionary biologist's [concerns](#) (39) need to be heeded and responded to. This 20-

minute [Senate](#) (40) is a must-watch as is [this one](#) (41) which comes in three parts. [Dr Fauci](#) (42) talks about some vaccines having to be withdrawn because of unexpected harms. A jabbed tech entrepreneur [points out](#) (43) the bleeding obvious.

Is it okay to ignore all of the above and attempt to inject the entire planet with a product that has no long-term safety data? Do you really think it is safe and effective for everyone, kids, infants and pregnant women? Is it now OK to take Medsafe out of the loop altogether as was done for the 4th booster, by yet another 'tweak' to the Medicines Act? This precedent now sees the monkey pox vaccine rushed in, at the bidding of the frankly hysterical Burnett Foundation, the newly repurposed Aids Foundation of old. Let's forget thalidomide, Vioxx, DES shall we? It's so safe, it's okay to twist the truth, exaggerate benefit, minimise harm, coerce and force people to comply and pretend the requirements of informed consent are being met? It's okay to mandate folk out of their jobs and split families and friends? It's okay to deny with unspeakable cruelty those deserving of an exemption?

What has happened to the medical profession? Have we made a Faustian pact, exchanging short-term status and wealth for our soul and conscience?

[Join NZDSOS' Truth Project too](#)

The medical profession and nursing / allied health are also invited to disclose anonymously what they are seeing since the rollout of the injections, to [The Truth Project](#) (32).
