

IVERMECTIN - IS THERE MORE TO THE STORY?

Ivermectin has been misrepresented in the mainstream media and to the medical profession. It is an approved prescription medicine in NZ with an excellent safety profile. However, several doctors and various other entities have made threats against prescribers with no medical, legal or scientific basis.

This is so that the injections could get 'Emergency Use Authorisation' in the US (provisional consent in NZ). Essentially, if there was an effective treatment, there was no ability to approve rushed vaccines. The same happened to Hydroxychloroquine and another WHO-recommended antiparasitic, artemesia. Other countries' disclosed Pfizer contracts forbid actual effective treatments, presumably as this would impact vaccine uptake.

1. The [11-min video](#) on this webpage describes the history of ivermectin, its discovery and Nobel prize, its safety and common uses.
2. [This website](#) keeps an up-to-date compilation of studies related to the use of ivermectin in covid 19.
3. This video is of [Dr Pierre Kory](#) (an experienced, highly published pulmonary and critical care physician) testifying to the US Senate in Dec 2020 about the overwhelming beneficial effects of ivermectin. He was vilified, cancelled and censored for sharing his discoveries, despite his impressive credentials and results.
4. This 3-min video is of [Dr Tess Lawrie](#) (a UK doctor whose business is Evidence Based Medicine) sharing the great news that there is an effective treatment for covid 19 with UK PM Boris Johnson in January 2021.
5. This [19-minute video](#) documents Dr Lawrie's interactions with Dr Andrew Hill and reveals how science was manipulated because Dr Hill's Liverpool University received funding (to the tune of US\$40 million) from Unitaid, who ostensibly did not want the information on ivermectin published.
6. [This excellent short video](#) (13 mins) featuring several highly experienced physicians and scientists, describes why and how ivermectin has been vilified and doctors prevented from prescribing it.

Understanding the story behind ivermectin may help to explain the the wider covid narrative.
