

What is needed is more conversation not less. The Medical Council of New Zealand (MCNZ) and the wider profession have not been willing to discuss the covid response or our concerns.

The best response to speech the MCNZ disagrees with is not absolute censorship, but rather for it to have the courage and strength of its convictions.

The MCNZ is free to respond in public to our claims, from a position of significant resources, mana and influence. By suspending and censoring doctors, the MCNZ has instead created an impression of trying to silence ideas it has no answer to.

COVID VACCINE EFFICACY AN EXAMPLE OF IGNORED REALITY

The relative risk reduction (RRR) from the original Pfizer vaccine was 95%.

However, absolute risk reduction (ARR) was 0.84%.⁸

**ARR IS THE NUMBER
DOCTORS AND
AUTHORITIES SHOULD
HAVE USED TO
INFORM PATIENTS.**

WHAT ELSE IS MISREPRESENTED?

ABOUT US

NZDSOS is a group of doctors, dentists, pharmacists and veterinarians who believe in and hold true to the Hippocratic Oath and First, Do No Harm.

We provide reasoned discussion and welcome conversations. We are concerned about the politicisation of medicine and science.

WHO WILL HAVE YOUR BACK?

What happens when you disagree with the next "consensus" or political narrative?

- 3rd trimester abortion
- puberty blockers
- mandatory vaccination

DID YOU KNOW?

The risks of the c19 vaccines exceed the benefits, using Pfizer and Moderna's own trials.¹

In the 2022-23 year, Medsafe received 84.05% of its funding from pharma & Australia's TGA receives 96% of its budget from the pharmaceutical industry.²

20 million lives saved by the vaccine is based on mathematical modeling not real world data, which shows 20 million lives lost due to the covid response.³

Myocardial inflammation is common, if not universal, after a 2nd mRNA covid vaccination.⁴

Vaccination against covid-19 may worsen the course and frequency of the disease.⁵

Medsafe has never recommended the vaccine for all pregnant women or stated that it is safe at any stage of pregnancy.⁶

The Pfizer injections are contaminated with plasmid DNA which may enter the nucleus, as can the modified RNA.⁷
