

29 February 2024

Dear MPs, Ministers and relevant regulators.

Executive summary of our position and concerns:

We refer to our extensive list of emails and open letters available [here](#), with the most recent summary of harms [here](#).

1. The covid-19 injection must be withdrawn immediately. It is the most dangerous medical product ever released. Serious harms are a fact.
2. New Zealanders are dying and being damaged in large numbers, and continuing to recommend the injection will cause more harm and death to New Zealanders.
3. The approval process, and the Pfizer contract itself, are based on fraud, and thus can be cancelled. The injection was sold, to politicians and the public alike, as preventing covid. Plainly it does not; it actually increases covid infections. In the original approval trial (which indicated an absolute efficacy of 0.84%), and the trial for young children, crucial negative data was withheld.
4. The product tested in the clinical trial was manufactured by Process 1 while the product being injected into New Zealanders is manufactured differently, and thus different by definition, at scale, by Process 2.
5. There have been multiple significant discoveries since the vaccine rollout, each of which should have triggered a recall by Medsafe. Some of them are listed below:
 - widespread biodistribution, to the heart, brain, bone marrow etc;
 - harms highly concentrated into a few batches;
 - severe safety signals in adverse event report databases;
 - myocarditis rates far higher than originally admitted;
 - increased heart strain in all the injected that were tested;
 - microRNA and bacterial plasmid DNA contamination;
 - integration into the human genome;
 - RNA frameshifting, and prolonged spike protein production;
 - a new disease process of fibrous white 'clots' reported mostly in dead, but occasionally in living people.

6. Our safety monitoring system (CARM) is unfit for purpose and has not been able (or willing) to do the thorough assessment required for each serious adverse event and death following vaccination.

7. The nation is in jeopardy and a properly resourced inquiry - independent of pandemic decision makers - must be instituted, but not before the immediate cessation of the covid injections, which have not prevented the 'fifth wave of covid' in the vaccinated.

8. Other countries now only recommend the injections to older patients. New Zealand ploughs on, despite most 'cases' occurring in the multiply vaccinated, and is currently introducing an 'updated' injection for a variant that is no longer circulating. This is being recommended to everyone over the age 30 and higher risk younger people.

9. Some nations with low vaccination rates have avoided the excessive death toll of ALL the heavily 'vaccinated' countries. For instance, the most highly injected European countries have the highest current excess all-cause mortality - Finland and Portugal - whilst the least 'vaccinated' countries of Romania and Bulgaria have the lowest death rates.

10. NZ is in the grip of an epidemic of sudden unexplained deaths, and all-time high mortality rates - conservatively estimated by eminent economist John Gibson at over 4000 excess deaths since the rollout. He also deals with the purported negative excess mortality during the pandemic, discussed here. The media is full of stories of "Died Suddenly" and young people having a "medical event". MPs were told, incorrectly, that modelling suggested many lives were saved from covid. We strongly disagree.

In summary, since the jab hasn't worked, is dangerous and it may be up to 2 years until an Inquiry releases its final report, caution and common-sense dictate that we must stop it now. Lives can be saved by doing so and the New Zealand parliament can be seen as a world leader.

NZDSOS members request to discuss our concerns in more detail and with references, in person.

Regards,

Dr Matthew Shelton, Dr Cindy de Villiers, Dr Alison Goodwin
