

June 19, 2025

Dear Mr Chris James, Mr Simeon Brown, Ms Sonerson, Dr Ian Town and Ms Costello, Messrs Luxon, Peters, Seymour and Hipkins

Some of you will be aware that recently both the US Food and Drug Administration and the Australian Therapeutic Goods Administration have withdrawn recommendation for covid-19 vaccination to certain groups - "healthy children and healthy pregnant women" in the US, and "healthy children under 18" in Australia.

We have been urging the injectables' *complete* withdrawal in the strongest possible terms due to significant harms, since our inception in April 2021, for reasons recently summarised in the paper discussed here.

<https://www.thefocalpoints.com/p/breaking-peer-reviewed-study-finds>

The total burden of evidence of danger in the peer-reviewed literature is far too large to ignore - as working up our RCI phase 2 submission has impressed upon us yet again - so only wilful blindness and callous indifference can reasonably explain medical scientists' actions, which politicians claim to rely on. In fact it is hard to keep up with the emerging concerns, which include further confirmation of ovarian damage, and increased global death rates and fertility reduction in vaccinated countries.

Discussion on both of the overseas regulatory changes are covered in this week's edition of cmnnews.substack.com. There are also articles related to two very serious safety concerns - cancers, and amyloid prion disease in the blood, about which we have written frequently, and which is now being identified in children.

<https://cmnnews.substack.com/p/the-scariest-covid-vaccine-story>

Here is one presentation on these topics to the New Zealand Royal Commission of Inquiry (RCI) by [genetics expert Dr Kevin McKernan](#).

He covered too the presence of vaccine plasmid DNA in human blood, undermining claims of safety from transfused blood. He pulls no punches, and neither should you in helping the country.

He states: "*This may be the largest carcinogenic (cancer causing) hit ever on the human population, and we have these on childhood schedules. We are giving these to pregnant women. This has gone absolutely off the rails and it is time people pulled back and looked at this data more soberly without the panic of the covid pandemic clouding everyone's judgement.*"

NZ is dealing with an undoubted cancer epidemic already, which threatens to touch us all, and Kevin covers some of the mechanisms from the injections.

Pushing yet more vaccines is a Quixotic pouring of accelerant on the immune-failure fire. Current radio ads exhort more boosters "*if it's been more than 6 months since your last bout of covid or booster jab*". Don't you see the failure-admitting irony of that messaging to the public?

Chronic excretion of DNA-containing infectious particles by injected people exposes the unvaccinated to risks also. You are answerable for harm to the New Zealand public.

Yet again, we call on you act to prevent further harm, especially to pregnant women and children who are still being targeted, against every tenet of medical ethics and human rights.

Yours sincerely,

Drs Alison Goodwin, Matthew Shelton and Cindy de Villiers on behalf of NZDSOS members and supporters
