

October 22, 2026

Dear Members of Parliament and Prospective Candidates,

We write at the end of this government's term with a warning. The next Parliament will preside over disclosures of covid jab wrongdoing so profound that the current silence will become untenable. Some of you already know, and this is why you are running from the questions. Most of you were profoundly deceived by the system you seek to join.

The covid gene transfer products – still promoted as safe to pregnant women and children – are a health nightmare. Look at the vaccine disease burden in family, friends and constituents. The media may call much of this 'long covid', but the majority of New Zealanders experiencing new illness are covid vaccinated, and in most cases symptoms started post-vaccination, not post-infection.

To inspire you to find and support the truth, and reassure that you won't have to be the first, we look at some recent initiatives involving MPs overseas. You've had heavy lifting done at home by Sue Grey, Aly Cook, Matt King, Tanya Unkovich and Winston Peters.

Don't wait for the medical profession to ring alarm bells. Twenty thousand NZ doctors were mostly shut down by the 2021 Medical Council's "zero risk medical product" assessment and intolerance of dissent. Most have not recovered from the deception, threats and moral injury. If you know something you must say something.

The Allison Inquiry: What Happened in Canada

From 8 to 11 September 2026, an independent inquiry convened on Parliament Hill in Ottawa by Conservative MP Dean Allison heard testimony from 50 witnesses selected from more than 1,400 applicants. It made no formal findings of fact, but put on the public record what thousands of Canadians have been saying for five years: that the covid-19 vaccine

programme injured them – some terribly – killed their loved ones, and that their government refuses to listen.

The *Toronto Sun* published an editorial calling for resignations, arrests and a full public inquiry called by the Prime Minister, describing the programme as "the biggest health policy mistake in Canadian history at best, or crime against humanity at worst", and stating: "The COVID-19 vaccine program, deployed at the height of pandemic-period mania, injured tens of thousands of regular Canadians, and killed thousands of Canadians to boot."

<https://torontosun.com/opinion/columnists/allison-inquiry-resignations-public-inquiry>

Dr. Charles Hoffe testified that when he reported vaccine injuries among his patients of 28 years to senior health officials, he was attacked professionally. (Over 20 NZ doctors have been similarly severely sanctioned.) A Canadian military lawyer testified that serving soldiers cannot report a vaccine injury without risking court-martial. An Ottawa police detective testified that she observed a doubling or tripling of unexplained infant deaths in early 2022, reported her concerns, and was suspended without pay and demoted.

Multi-disciplinary scientists, a cardiologist and an obstetrician presented inarguable but ignored safety signals of harm for pregnancy, fertility and children – and the rest of us – from the covid gene product. (We have presented their findings and much more to government many times.)

This is what an independent inquiry looks like when it is not constrained by terms of reference designed to protect the powerful.

The Australian Parliament: Documents Ordered

On August 13, 2026, the Australian Senate passed a motion led by Senator Alex Antic ordering the Department of Health to produce all documents relating to adverse pregnancy outcomes, miscarriage risk and infertility associated with covid-19 vaccination. The documents were due by September 7 but are still withheld, despite a formal order of the national parliament.

<https://www.openaustralia.org.au/senate/?id=2026-08-13.119.2>

Senator Malcolm Roberts has been asking these questions since 2022. He held two cross-party inquiries, "COVID Under Question", in March and August 2022, where doctors, scientists and injured people testified. He has stated in Parliament that "the genetic timebomb of mRNA vaccines is still ticking" and that "more people are dying and more will die".

Senator Roberts recently contributed to a Sydney event featuring many concerned prominent Australian and international speakers. Listen particularly to Professors Charlie Teo (neurosurgery) and Angus Dalgleish (Oncology and Virology).

The MAHA Coalition: 63 Million Followers Demand Action

A coalition of 168 physicians, scientists, lawmakers and public figures representing over 63 million social media followers sent an open letter to U.S. Health Secretary Robert F. Kennedy Jr. and President Donald Trump. The letter demands:

- Removal of the mRNA platform from the market
- Termination of the Public Readiness and Emergency Preparedness Act (PREP) declaration for covid-19 injections
- Repeal of the PREP Act entirely
- A ban on pharmaceutical direct-to-consumer advertising, which is legal only in New Zealand and the United States

- Review of healthcare incentives that promote medical coercion and punish dissent
- An end to conflicts of interest at the CDC, FDA, NIH and NIAID

The letter states: "We do not need more data to determine whether mRNA products should be removed from the market. The data are already in from multiple credible sources, including over 4,550 peer-reviewed publications."

The signatories include Dr. Peter McCullough, Dr. Aseem Malhotra, Dr. Robert Malone, Dr. James Thorp and Tucker Carlson.

Northern Netherlands Court Hears Action Against Key Pandemic Players

This week, defendants Pfizer CEO Bourla and the world's most successful vaccine investor, Bill Gates, are dragged into a Dutch court to answer to victims. Or at least, their lawyers are. Listen to prosecutor Stassen and his experts lay out their case. Be warned – your world view may be profoundly shaken.

The Responsibility of Power

Political power is a trust not a shield. When you are elected, you accept the responsibility to govern honestly, to answer questions, and to face the consequences of your decisions. You do not get to decide which questions are allowed and which can be dismissed by attacking the questioner.

The next Parliament cannot avoid what is coming. The evidence is accumulating too fast. Other countries are beginning to confront what happened. New Zealand will not be exempt.

The Royal Commission of Inquiry into COVID-19 – Lessons Learned, Phase Two, was explicit that vaccine safety concerns were underestimated, that mandates were "controversial", and that people who said they were injured did not feel supported. But the Commission did not examine the full body of evidence on vaccine safety. It did not subpoena the key players. PM Ardern, Chris Hipkins and Ashley Bloomfield never appeared in the public session. The transcript of Medsafe's interaction with the Commission remains hidden.

We go far further. Whether you can believe it or not, our open letters at [NZDSOS.com](https://nzdsos.com), and over a thousand articles, show that:

- The covid jabs have almost certainly killed thousands here in NZ. From the cases we have examined, there is a pattern of coroners looking away – and not serving the families – and numerous other signs of cover-up.
- The grossly overblown pandemic was about injecting gene transfer technology – they are not vaccines.
- The Watson study showing the supposed saving of 14.4 million lives by vaccination has been roundly refuted.
- The product injected was NOT the one Medsafe gave its reluctant approval to.
- There was clear early knowledge that harms were occurring. Every decision-maker since that point carries liability.
- It is a terrible stain on medicine that those in charge removed medical ethical safeguards.
- The original approval trials (of the 95% effective type) were fraudulent and grossly exaggerated any potential benefits. In the event, it was all harm.

Until all this is addressed the public will continue losing trust in institutions.

What We Are Asking

We are asking every candidate for Parliament to commit to the following:

1. An independent examination of the full body of evidence on covid-19 vaccine safety and efficacy, including improperly or unexplained deaths, excess mortality and increased long-term sickness since 2021.
2. A credible system through which people who believe they have been seriously injured, and bereaved families, can have their cases properly investigated.
3. A halt to the dismissal of legitimate questions. Calling a question "fake news" is not an answer. Calling the police on a voter who asks a question is not democracy. Using terms such as 'anti-vaxxer', 'misinformation', 'anti-science' and 'conspiracy theorist' to silence and censor citizens suggests an inability to, or fear of, answering questions.

A Warning

With power comes responsibility, and neglecting it invites public response. The next Parliament will preside over far more shocking disclosures than this. You can face them honestly, or you can be swept away by them.

Please advise what you plan to do in regards to the three requests above.

Yours sincerely,

Drs Alison Goodwin, Matt Shelton on behalf of the hundreds of doctors at NZDSOS and tens of thousands of our supporters
