NZDSOS
NEW ZEALAND DOCTORS SPEAKING OUT WITH SCIENCE

September 7, 2026

Medical Council of New Zealand
Level 24, AON Centre
1 Willis Street
Central Wellington 6011

Email: mcnz@mcnz.org.nz

Dear Ken,

Thank you for replying to our letter.

Regarding Dr Shelton's imminent tribunal as a reason not to engage with NZDSOS, we heard in court from MCNZ lawyers during our challenge to your Guidance Statement that the PCC and HPDT processes are independent of the MCNZ, so there ought to be no impediment to engagement with us on that basis. At any rate based on the experience of our colleagues, the verdict may take many more months. Are we to wait until after that or just the hearing until we can speak?

Please confirm when you think it would be acceptable to talk together.

We quite understand MCNZ staff may be uncomfortable with our prolonged advocacy, but our interest remains for the wellbeing of the New Zealand public rather than pursuing antipathy towards MC members.

Our concerns are more urgent than ever and, as a prior Council member and now Chair, they land firmly in your lap, encompassing patient safety and the upholding of medical ethics, both of which are specifically required of Council under the HPCAA.

Dr Clark, evidentiary suggestion of wrong-doing by officials regarding myocarditis risks for our young is emerging into the public domain.

Winston Peters, a lawyer as well as senior politician, has referred to those who will have "truncated, ruined lives as a consequence" of the vaccine. Studies on biochemical analysis and prevalence of the rubbery amyloid-like white clots is being published. Their presence in potentially many millions is too important to ignore, however mind-boggling it might seem. The health system is overwhelmed and no decision-makers are looking into why, though we have provided explanations.

Of relevance to your own speciality, the white-hot issue of the unprecedented - and ongoing - blanket recommendation to vaccinate all pregnant women at any stage of pregnancy remains unaddressed. This is despite expert recognition in 2022 that Omicron was NOT a threat in pregnancy (hence the cessation of the COVID-19 Infection in Pregnancy in New Zealand Registry overseen by Dr Katie Groom) and some peer-reviewed literature demonstrating harm to mothers and babies, including from Pfizer itself - and you will have followed the revelations from the Fauci Diaries. This must all be engaged with for the public good.

NZ's covid vaccine policy is increasingly isolated and out of step with our peer countries and, as far as we can ascertain, no other overseas regulator has defined the vaccines as "zero risk products" as did past chair Dr Curtis Walker. Do you agree with his assessment?

Previous chair Dr Love and Mr Watt - whose egregious conflict was never addressed - were deemed by Minister Brown to have strayed from their defined mandates into ideological hot water. Mr Brown is accepting more information on vaccine harms and will presumably expect Council to engage with this too, as will many in the profession. He will be acutely aware the buck stops with him, as articulated by former MP Rodney Hide in this video for the Covid Inquiry phase 2.

There is already more than enough multi-level corroboration as to the harms of covid vaccines in our Truth Project. Many of these people would testify in court to their experiences.

Our view is that we are all united by concerns for the NZ public, and where our perspectives differ on what the threats are, they must be resolved by discussion and debate rather than refusal to engage, with medical ethics as the backstop which must have the last word.

Increasing numbers of people do not trust our profession. By continuing not to engage with our concerns and those of our supporters, distrust is further entrenched. Conversely, open dialogue is the first step in restoring trust.

As part of our overall efforts, and to stay well clear of potential criminal liability for not acting on information which may prevent harm, we reserve the right to post these communication attempts into the public domain.

Finally, here are two more letters of concern sent to governments in the UK and Canada in the last 2 weeks.
